Recycling

What happens with your trash when you throw it away? Trash can stay in a dump for a very long time. It is not good for the Earth to have too much trash. There is a way you can help. Some kinds of trash can be recycled. That means it can be turned into new things. Paper can be recycled. Plastic can be recycled, and glass can be recycled. When you recycle, you need to put it in a different bin. Then it is taken to the recycling station. First, they sort the trash. All the paper goes together. All the plastic goes together, and all the glass goes together. Fresh new paper, plastic, and glass are made from the ones that were thrown away. People can use them again and again. Recycling is good for the Earth.
