Arranging Tables

Version 2, page 13

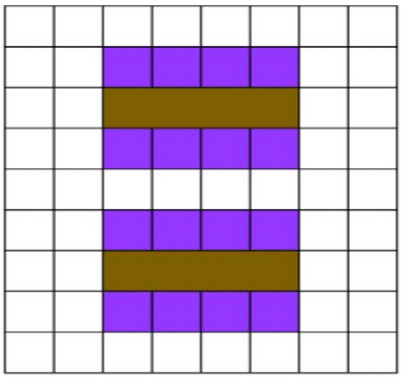

Your school has rectangular tables that will be set up in the gymnasium. The tables will seat 8 people with no more than 4 on each side. Your teacher has asked you to draw a diagram of the tables and chairs using the graph paper and the key below. You must have one seat for everyone attending the barbeque.

You can seat students on the long sides of each table only. Tables measure 4 squares long. Chairs measure the size of one square. As you arrange your tables, you must leave at least one row of empty spaces between chairs so that people can get in and out without bumping into each other.

Use the shape tool to draw and move your shapes around the grid. Once you are happy with your design, shade the tables brown and the chairs purple.

How many tables do you need to set up?

Example

KEY:

= table = chair

AT THE CHECKOUT

You are almost finished! All of the items your sister, Julia, wanted can be found near the registers at the

REFRIGERATED GOODS

BUDGET CHECK #4

Answer the following questions based on the table on the previous page.

JULIA'S PIGGY BANK

Your sister, Julia, has been doing odd jobs for the neighbors after school, and she has been saving up the money she has earned in her piggy bank. Answer the questions below.

BUDGET CHECK #1

It's important that you keep track of the budget to make sure you have enough money to buy all the items. In the table below, fill in your estimate for Mom's groceries from the previous page. Calculate how much money you estimate you will have left after getting Mom's items.

Person's Groceries	Estimated Cost	Estimated Total Cost
Mom	$ 20	$ 25
Grandma	$ 8	$ 10
Dad	$ 15	$ 20
Julia	$ 8	$ 10

Final Amount Remaining

$95 (Starting Budget) - 65 (Estimated Total Cost) = 30 (Money Remaining)
