FULL LESSON PLANS

Compare and Order Length

Day 1: Introduce comparing and ordering objects by length

Mini Lesson: Introduce the purpose of the lesson today: to compare objects based on length.

- Show students the unit vocabulary cards.
- Watch the Compare and Order Objects Song.
- Introduce the "Compare and Order" Anchor Chart.
- Explain that when we compare lengths, we look at how long or how tall something is.
- Explain and elaborate that we can look at objects and compare their lengths to determine which is longest and which is shortest.
- Model comparing 3 classroom items (perhaps 3 pencils, a pencil, eraser, and a paper clip, etc.). Narrate your comparison process by lining them up at the same endpoint, then narrate as you look at the objects and identify which is the longest and which is the shortest.
- Repeat this with 3 more objects.

Guided Practice: Use the comparing guided practice model; you can display this on the board or projector. As a class, work together to identify which object is the longest and which is the shortest for the two guided practice models.

Independent Practice: Students complete the Comparing Objects worksheet.

Day 2: Comparing and ordering objects by length

Mini Lesson: Introduce the purpose of the lesson today: to compare and order objects by length.

- Watch and sing the Compare and Order Objects Song.
- Review the "Compare and Order" Anchor Chart.
- Explain to students that you will be using the comparing skills they mastered yesterday to order objects according to their length.
- Model comparing 3 objects from the classroom (crayons, markers, pencils, etc.). Narrate which is the longest and which is the shortest. Then, narrate placing them in

MINI-BOOK

Sometimes in math, equations lose one of their numbers!

These equations need YOUR help to find their unknown numbers!

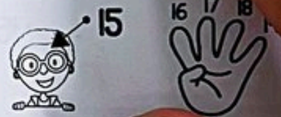

©Gabi Barbosa

Engagaing

Pre-Teaching

As a number detective, you have 3 strategies you can use to help the equations find their missing number!

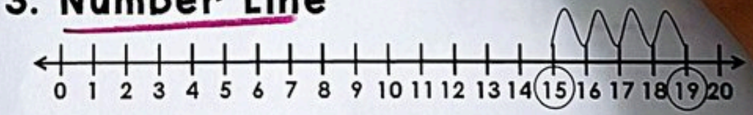

1. Count On

2. Part-Part-Whole

3. Number Line

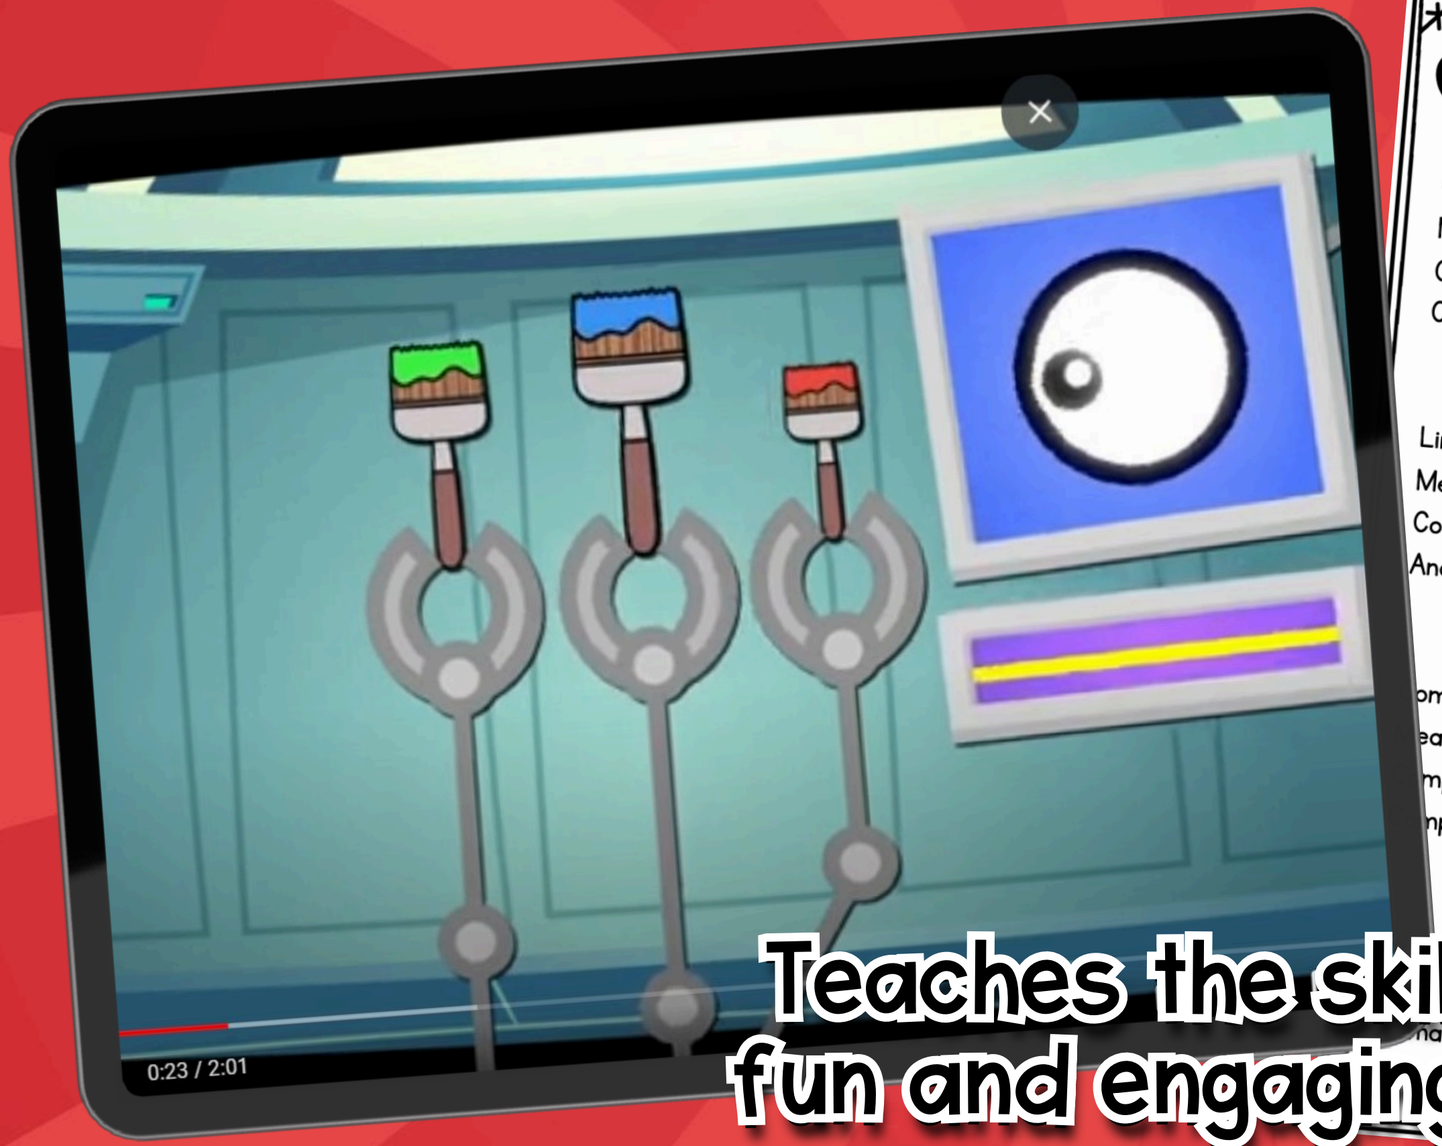

These equations need YOUR help to find their unknown numbers!

ORIGINAL SONG & VIDEO

Compare and Order

Compare and order, compare and order
Measure each size then put them in order
Compare and order, compare and order
Compare the lengths and then put them in order

Line everything from end to end
Measuring them from the starting
Compare each size as you go down the row
And then order them how they are supposed to go

ompare and order, compare and order
easure each size then put them in order
mpare and order, compare and order
npare the lengths and then put them in order

gest if you want to do that
up to you
what to need to do

©Jodie Bacchus

Teaches the skill in a fun and engaging way

ANCHOR CHARTS

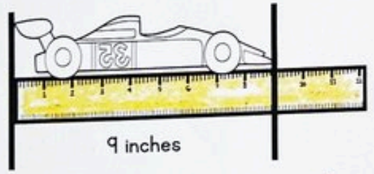

Measuring

We measure to know the size or amount of something. We can measure length to find out how tall or long something is!

1. Start at the **zero marker**, or **endpoint**.
2. Measure from **endpoint** to **endpoint**.

NO overlaps or gaps!

Name: _____ Date: _____

Measuring in Inches

Directions: Measure the lines using your ruler. Write your answer in inches.

Measure endpoint to endpoint!

1. _____ inches
2. _____ inches
3. _____ inches
4. _____ inches
5. _____ inches
6. _____ inches

ASSESSMENTS

Name: _____ Date: _____

Composite Shape Quiz

Look at the composite shape. Write the names of the 2D shapes in each composition and how many of each shape there are.

1.

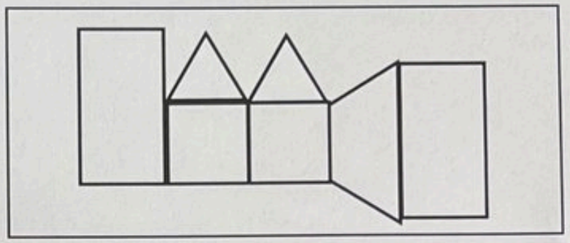

_____: _____ _____: _____

_____: _____ _____: _____

_____: _____

2.

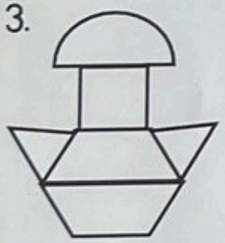

_____: _____ _____: _____

_____: _____ _____: _____

_____: _____

Look at the composite shape. Determine whether the description of the shape is TRUE or FALSE.

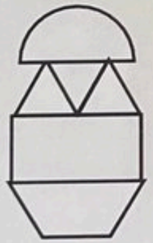

3.

- 1 Circle
- 1 Square
- 1 Hexagon
- 2 Triangles

TRUE or FALSE?

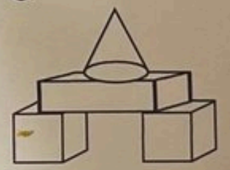

4.

- 1 Half-circle
- 3 Triangles
- 1 Rectangle
- 1 Trapezoid

TRUE or FALSE?

5.

- 1 Cylinder
- 1 Rectangular Prism
- 2

TRUE or FALSE?
